

News Release

09.2010

Elektro-Metall Export GmbH (EME) was chosen by Diehl Aircabin to supply electrical harnesses for the Airbus A350 XWB program.

The package, which is one of the biggest contract ever signed at EME, consist of certain engineering packages as well as the manufacturing of electrical floor-to-floor harnesses for the cabin interior of the next-generation Airbus A350 XWB.

This is a very important contract for us, as EME has already been a reliable supplier to Diehl Aircabin on the Airbus A380, but also because EME is the first time also responsible for certain engineering packages under the new A350 XWB contract. The series production of the electrical harnesses shall be performed in our modern production facility in Paks, Hungary.

EME is a leading company in the supply of electromechanical actuators, electrical wiring harnesses and electromechanical components for the International aerospace industry.
