News Release

04.2011

Elektro-Metall Export GmbH (EME) is proud to announce to have won the Crystal Cabin Award 2011 for the “Non-Touch Waste Flap” in the category “Greener Cabin, Health and Safety”

Working together with Schueschke Solid Surface, Elektro-Metall Export has developed an automatic flap for waste bins in aircraft lavatories. A capacitive sensor responds to the proximity of the user’s hand to activate the flap, so that aircraft of the future can offer a more hygienic and thus more pleasant environment for passengers and crew.

EME is very orgulous of having received the Crystal Cabin Award, which is the reward towards our efforts and activities in Research & Development over the last years.

A total of 52 entries from ten countries were received by the Crystal Cabin Award Association in Hamburg, with 21 of them reaching the final round. The Crystal Cabin Award 2011 is supported by Airbus, the Aircraft Interiors Expo (Reed Exhibitions), Aircraft Interiors International Magazine, Assystem, Bishop GmbH, DIEHL Aerosystems Holding GmbH, FERCHAU AVIATION Division, HTG Media Hamburg, Jetliner Cabins, and SGS Germany GmbH.

EME is a leading company in the supply of electromechanical actuators, electrical wiring harnesses and electromechanical components for the International aerospace industry.
